# Government Frequency Band Callbox

Carmel, Indiana – Ritron, Inc. recently introduced the OutPost Callbox for use by US government agencies. The new product extends application of the popular Callbox by utilizing frequencies in the range of 406-421 MHz. The OutPost Callbox is ideal for government agencies such as the Postal Service, the military and any entity requiring a Callbox for wireless two-way radio communication. These extended frequencies also serve some overseas markets.

The OutPost Callbox RQX-406 and RQX-406-XT join a long list of cost-effective quality products manufactured by Ritron. The RQX-406 is a basic version, while the RQX-406-XT features a stainless steel faceplate with tamper-resistant fasteners and fiberglass housing, making the product sturdy and secure.

Ease of installation is a benefit. Without costly trenching and hardwiring, the product can be installed in minutes at a fixed location. Simplicity of operation is another advantage. Workers or site visitors speak into the Callbox. Supervisors, managers, guards... can answer back using a base station or handheld radio, nearby or at a distance. The product saves money too, since there are no monthly usage fees.

Powered by battery or optionally AC, the OutPost Callbox serves a broad range of applications including farms, parks, trails, schools, prisons, airports, campuses, hospitals, elevators, parking lots, loading docks, waiting rooms, construction sites... Ritron also offers an OutPost<sup>®</sup> Callbox with a radio-activated contact closure that can activate CATV, open and close a gate, etc.

Ritron designs and manufactures a complete line of wireless radio communication systems and products for worldwide distribution. Contact Ritron at 800-872-1872 or visit us on the web at [www.ritron.com](http://www.ritron.com).

OutPost<sup>®</sup> is a registered trademark of Ritron, Inc.
