Quick Talk Alert Monitor Anything from Anywhere

Carmel, IN – The Quick Talk is an automatic voice alerting Radio Transmitter. Integrating advanced digital voice recording technology with a radio transmitter, the weather resistant Quick Talk monitors up to 2 contact closure/switch inputs and transmits “custom” voice messages over any VHF or UHF radio system, even repeaters.

Since the Quick Talk Alert automatically transmits a voice alert message to radio-equipped personnel when a contact closure/switch changes status, its uses are nearly limitless. Applications where the Quick Talk Alert is suited include: manufacturing, assembly and production lines, warehousing, and remote locations.

The battery-operated (6 AA alkaline or Ni-Cad) Quick Talk permits 24-hour monitoring up to one year (12,000 transmissions) of any dry contact closure; such as, thermostats, humidistats, magnetic reed switches, float switches, smoke/carbon dioxide detectors, momentary switches, or any other switch. When a switch/contact closure changes state (opens and/or closes) the Quick Talk alerts radio-carrying personnel immediately with a voice message of the status of pumps, lights, doors, fans, temperature, liquid levels, pressure limits, leak detection, or power failures.

Quick Talk radio transmitters are available in VHF and UHF bands. Line of sight coverage up to one-half mile with supplied antenna. A standard pulse dialing telephone is all that is needed to program a variety of operating features, TX frequencies, CTCSS, Quiet Call (QC) and Digital Coded Squelch (DQC) signalling. Other features include, external power capabilities with Ni-Cad trickle charge, and low battery alert message.

Ritron Inc. manufactures a complete line of Land Mobile Radio (LMR) products and accessories for worldwide distribution. All Ritron products are proudly designed, made, and serviced in the USA.
